

## Thin | Lightweight | Durable Architectural Precast Cladding

EnCon is proud to offer Arcis Rainscreen®, a critical component of the traditional rainscreen system. The Arcis Rainscreen® is manufactured using high performance concrete and stainless steel prestressing cables, with each panel designed project specific, meeting PCI MNL 116 or 117 specifications. Arcis Rainscreen® achieves the architectural look and durability of a traditional precast enclosure without the extra weight or loss of design performance.

Arcis Rainscreen® attaches to the structure using a J-Channel and metal clips bolted to the back of each panel. The lightweight panel allows for installation via tower crane, at nearly any radius, or in some instances, delivered and installed through windows. This method of attachment, along with pre-engineered pieces, allows for a fast and simple installation, saving time and money.

## Versatility

Range of Architectural Possibilities  
Color and Finish Flexibility  
Ultra-thin Panel Technology from ¾" to 2"  
Lightweight Design 9.5 PSF to 25 PSF

## ARCIS Benefits

Design Creativity and Aesthetic Solutions  
Long Life Expectancy  
Superior Element Resistance  
Meets Precise Specifications  
Engineered and Detailed on a Project by Project Basis

## Quality and Durability

Meets PCI MNL-117 Quality Control Specifications  
High Quality Product and Plant Fabrication Control  
Each Mix Design is Specially Formulated  
Thin Panel Technology/Non-corrosive Prestressing  
Exceptional Strength/Durability  
Low Maintenance  
Resilient
